

10. • This is the basic unit of Object-oriented programming.

• Objects are like real-life entities. They have their properties and methods.

• This is both data and function that operate on data are bundled as a unit called an object.

• Objects are like real-life entities. They have their properties and methods. This is both data and function that operate on data are bundled as a unit called an object.

• This is the basic unit of Object-oriented programming.

6 • Objects are like real-life entities. They have their properties and methods. This is both data and function that operate on data are bundled as a unit called an object.

7. • This is the basic unit of object-oriented Programming.

- Objects are like real-life entities. They have their properties and Methods.

- This is both data and function that operate on data are bundled as a unit called an object.

8. • This is the basic unit of Object-oriented Programming.

- Objects are like real-life entities. They have their properties and Methods.

- This is both data and function that operate on data are bundled as a unit called an object.

9. • This is the basic unit of Object-oriented Programming.

- Objects are like real-life entities. They have their properties and Methods.

- This is both data and function that operate on data are bundled as a unit called an object.

4. This is the basic unit of Object-oriented Programming.

- Objects are like real-life entities. They have their properties and methods.

- This is both data and function that operate on data are bundled as a unit called an object.

5. This is the basic unit of Object-oriented Programming.

- Objects are like real-life entities. They have their properties and Methods.

- This is both data and function that operate on data are bundled as a unit called an object.

6. This is the basic unit of Object-oriented Programming.

- Objects are like real-life entities. They have their properties and Methods.

- This is both data and function that operate on data are bundled as a unit called an object.

1. Object

- This is the basic unit of Object-oriented programming.
- Objects are like real-life entities. They have their properties and methods.
- This is both data and function that operate on data are bundled as a unit called an object.

2. This is the basic unit of Object-oriented programming.

- Objects are like real-life entities. They have their properties and methods.
- This is both data and function that operate on data are bundled as a unit called an object.

3. This is the basic unit of Object-oriented programming.

- Objects are like real-life entities. They have their properties and methods.
- This is both data and function that operate on data are bundled as a unit called an object.
